

Year group: 12

**Subject:** <u>Computer Science: Paper 1 – Computer Systems</u>

Time period	Autumn 1	Autumn 2	Spring 1	Spring 2	Summer 1	Summer 2
Content	1.1 The characteristics of contemporary processors, input,		1.4 Data types, data structures and algorithms			1
	output and storage devices					
Declarative Knowledge – 'Know What'	1.1.3 - Input, output and storage (a) input output and storage devices (b) magnetic, flash and optical storage devices	1.2.1 - Systems Software  (a) Operating systems (e) Distributed, Embedded, Multi-tasking, Multi-user and Real-Time operating systems	1.4.1 – Data types (f) Floating point arithmetic (g) Bitwise manipulation and masks (h) character sets (ASCII	1.4.2 – Data structures - continued b) linked-list, graph (directed and undirected), stack, queue, tree, binary search tree, hash table	1.3.4 – Web technologies  a) HTML, CSS and JavaScript continued d) Server and client-side processing	a) The TCP/IP Stack b) Protocol Layering c) LANS and WANs d) Packet and circuit switching
	(c) RAM and ROM (d) Virtual storage  1.1.1 Structure and function of the processor (a) The Arithmetic and Logic Unit; ALU, Control Unit and Registers (Program Counter; PC, Accumulator; ACC, Memory Address Register; MAR, Memory Data Register; MDR, Current Instruction Register; CIR) (b) The Fetch-Decode-Execute Cycle	(f) BIOS (g) Device drivers  1.2.2 - Applications Generation (a) The nature of applications (b) Utilities (c) Open source vs Closed source  1.4.1 - Data types (a) Positive integers in binary (d) hexadecimal (b) Negative numbers in binary (c) Addition and subtraction of binary integers (e) Floating-point numbers in binary (f) Floating point arithmetic, positive and negative numbers, addition and subtraction of subtraction	and UNICODE)  1.4.2 – Data structures (b) linked-list, graph (directed and undirected), stack, queue, tree, binary search tree, hash table (c) How to create, traverse, add data to and remove data from the data structures mentioned above.	1.2.4 - Types of Programming Language b) Assembly language 1.3.4 - Web technologies a) HTML, CSS and JavaScript		e) Protocols f) Client-Server and Peer to Peer
Skills	1.1.3 - Input, output and	1.2.1 - Systems Software	<u> 1.4.1 – Data types</u>	1.4.2 – Data structures -	1.3.4 – Web technologies	<u>1.3.3 - Networks</u>
Procedural Knowledge	a) How different input output and storage devices can be	(a) The function and purpose of operating systems (e) Distributed,	(f) To use addition and subtraction arithmetic on Floating point positive	b) The structures to store data: linked-list, graph	a) HTML, CSS and JavaScript d) the benefits of	a) The TCP/IP Stack, (b) Protocol Layering (e) Protocols - how the use of
'Know How'	applied to the solution of different problems	Embedded, Multi-tasking, Multi-user and Real-Time operating systems.	and negative numbers, (g) Use Bitwise manipulation and masks:	(directed and undirected), stack, queue, tree, binary search tree, hash table	client-side processing (JavaScript) server-side	sockets and TCP allows guaranteed connections.

	b) The uses of magnetic, flash and optical storage devices c) The differences between RAM and ROM d) How Virtual storage works  1.1.1 Structure and function of the processor a) How this relates to assembly language programs b) How the FDE cycle decodes each instruction/data and its effects on the registers.	(f) The BIOS is used in the bootup process (g) The purpose of Device drivers and how they communicate with the Operating system.  1.2.2 - Applications Generation (a) Justify suitable applications and (b) utility software for a specific purpose (c) Understand the difference and uses of Open source vs Closed source  1.4.1 - Data types (a) Represent positive integers in binary (b) Use of Sign and Magnitude and Two's Complement to represent negative numbers in binary (c) To use Addition and subtraction of binary integers (d) Represent positive integers in hexadecimal (e) Representation and normalisation of floating-point numbers in binary (f) Addition and subtraction of Floating-point arithmetic, positive and negative numbers,	shifts, combining with AND, OR, and XOR (h) How character sets (ASCII and UNICODE) are used to represent text  1.4.2 – Data structures (b) Students will know the data structures used to store data: linked-list, graph (directed and undirected), stack, queue, tree, binary search tree, hash table. They will know when each of these should be used and how to write program code implementing these data structures.  (c) Students will understand the behaviour of each data type and know how to to create, traverse, add data to and remove data from the data structures	c) How to create, traverse, add data to and remove data from the data structures mentioned above  1.2.4 - Types of Programming Language (b) Assembly language Using and writing simple programs with the Little Man Computer instruction set to understand simple assembly code language. Understand how highlevel language routines are translated into low level processor instructions, and what those low-level instructions look like.  1.3.4 — Web technologies a) Students need to understand the purpose of HTML, CSS and JavaScript. They will know how to write webpages using HTML, CSS and JavaScript. They will be able to read, write, amend and interpret code using HTML, CSS and JavaScript.	processing across a network.  Practical exercises using PHP, MySQL and web technologies. Students need to understand the purpose of HTML, CSS and JavaScript. They should have experience of writing webpages using HTML, CSS and JavaScript.  (d) understand the difference between server and client-side processing, and should be aware of examples (for example JavaScript code vs PHP code) of processing on both sides. They should be aware of the benefits and drawbacks of both types of processing.	(c) LANS and WANs allow data to be interrogated and transmitted. (d) Packet and circuit switching (f) Client-Server and Peer to Peer - How networks are configured and connected to the internet -How IP addresses are mapped in and out of networks, use of proxies, -Network hardware, encryption, compression, hashing, sockets, protocols -the threats posed by malicious software and how computer systems can be attacked
Key Questions	What are the range of input and output storage devices used? What are the different types of storage devices? What are the characteristics of each type? Magnetic? Optical? And Flash? What is	Why do devices need an operating system? What different tasks does the OS perform? How do operating systems manage memory? What is paging and segmentation? How do	Why do we need to normalise floating-point numbers? What is the effect of right and left binary shifts on binary numbers? What is the	How does assembly language make use of registers? How are data and addresses transferred between registers? What is addressing? Which should be integrated with	What is the purpose of HTML, CSS and JavaScript? What is the difference between server and client-side processing? What are the benefits of server-side	What is the definition and purpose of a network? What is the importance of using protocols? What are network standards? What is the purpose and benefits of layering

	the purpose of ROM and	segments allow access to	purpose of using masks	assembly language? What	processing? What are the	protocols, particularly	
	RAM within a computer	memory What is virtual	with bitwise operations?	is immediate, direct,	benefits of client-side	within the TCP/IP stack.	
	system? Why is there a need	memory? What are the	What is a data structure?	indirect and indexed	processing?	What are the different	
	for virtual storage? How does	different classifications of	What is the difference	addressing in the writing,		layers within the TCP/IP	
	virtual storage work? What	operating systems? What	between a dynamic and	reading and tracing of		stack? What is the	
	are the benefits and	are the key features of	static data structure?	programs written		purpose of each layer?	
	drawbacks of virtual storage?	each? What is the role of	What is LIFO structure?	in assembly language?		How data is transmitted	
	What is the purpose and	the BIOS in a computer	What is a FIFO structure?	What is the purpose of		on the Internet? How are	
	function of the core	system? What is meant by	What is the relationship	HTML, CSS and		IP addresses and packets	
	components of the processor.	device drivers? Why are	between data and	JavaScript? What is the		used in the transfer of	
	What is the purpose of the	they needed for	memory? How is data	difference between		data? What is a LAN and	
	registers? The Data,	communication between	stored in each of these	server and client-side		WAN? How is the Domain	
	addresses and control buses?	hardware and the operating	structures, how is	processing?		Name System used to find	
	What is the purpose of the	system? What is meant by a	memory allocated? What			the IP of a URL? What is	
	FDE cycle? What are the	virtual machine? How are	is a circular queue? What			the purpose, function,	
	stages of the FDE cycle? How	they used to execute	is a priority queue? What			benefits and drawbacks	
	are the registers used within	intermediate code? What is	is a linked list? What is			of both packet and circuit	
	the FDE cycle? What factors	the purpose of applications?	Pre? Post and in order			switching?	
	will affect the performance of	Utility? General purpose?	traversal? Where are			What are network	
	the CPU? What is the Von	What are the differences	each of the data			security issues and	
	Neumann architecture? What	between open and closed	structures suitable for a			threats? How do we	
	is the Harvard architecture?	source software? How are	given data set or			minimise or prevent	
	How does these architectures	real numbers represented in	application?			these threats? What is	
	differ in storing instructions	a binary floating-point				the hardware required to	
	and data in memory? What	representation?				connect to and/or build a	
	are the benefits of each	·				network?	
	architecture?					What is the difference	
						between a client-server	
						and peer-to-peer	
						network.	
Assessment		End of unit	tests.		End of u	nit tests,	
		Past exam questions to c			Exam style HBL questions		
	Exam style HBL questions Programming exercises involving conversions: denary/binary/hex and ASCII/UNICODE				Past exam questions to consolidate learning		
					Practical activities using HTML, CSS And Javascript.
