

Subject:

Design and Technology

Year group: 12 & 13

Fusion 360	Flat pack products	NEA (Practise)	Year 13 NEA	Exam Practise and content
Students will cover a short project, which will expand their skills on CAD by teaching them how to use the advanced Fusion 360 program. Students will design a torch and lego brick as well as learn how to render and run stress and impact tests on their CAD outcomes and analyse their results.	Students will Start a small project with the focus of introducing them to the NEA task as well as the structure that it takes at A-level. The project covers research and design with a heavy focus on the section C development process in order to help students develop the crucial knowledge for this part of the NEA.	Students will complete a practise NEA project with the focus of getting them to work to a brief and strict deadline. The project covers research and design with a heavy focus on the sections A & B s in order to help students develop the crucial understanding of how to conduct primary and secondary sources of research as well as how to analyse and draw conclusions from their findings. Students will pick from 3 contexts, set by the exam board.	This is the final year NEA for students. They will conduct their own studies utilising the skills they have learnt over the course of the year. The project should include a challenging brief and context set by the student, as wel them producing a demanding final outcome.	Students will cover the wide range of theory associated with the course. The content builds on from what we have covered on the GCSE course and there is an overlap with subjects such as Geography, Science and Business studies which provides opportunities for cross curricular learning. There is also the mathematics content which accounts for 15% of the exam questions.
The main focus of this project is the CAD program, which will allow students to achieve the following:	Students will look at how the NEA should be laid out and then produce a 20-25 page partfolio covoring	Students will look at how the NEA should be laid out and then produce a 30 page	Students will apply what we have covered from the previous projects to	The topics covered are as follows. Each topic has a link to all of the sub topics for that section
 Create complex structures High Level Renders Run Simulations & Tests Animate moving joints Create design sheets to showcase their work. 	 Section A - Initial investigations Section B - Design Brief and Spec Section C - Development Section D - Making Section E - Evaluation There will be a focus on sections A and C in this 	 Section A - Initial investigations Section B - Design Brief and Spec Section C - Development Section D - Making Section E - Evaluation There will be a focus on sections A, B and D in this 	produce a 45 page NEA portfolio on a context of their own choosing. They will need to plan all aspects of their project and plan their time accordingly. Students will cover the following • Section A - Initial	 3.1 Technical principles - Paper 1 3.2 Designing and making principles - Paper 2 We also develop the students skills in answering exam questions ranging from the short 4 mark questions to the
	Fusion 360Students will cover a shortproject, which will expandtheir skills on CAD byteaching them how to usethe advanced Fusion 360program.Students will design a torchand lego brick as well aslearn how to render and runstress and impact tests ontheir CAD outcomes andanalyse their results.The main focus of this projectis the CAD program, whichwill allow students to achievethe following: <td>Flat pack productsFusion 360Students will cover a short project, which will expand their skills on CAD by teaching them how to use the advanced Fusion 360 program.Students will Start a small project with the focus of introducing them to the NEA task as well as the structure that it takes at A-level. Curriculum Map

	Depending on students ambitions, there are additional sessions available on Revit (architecture) and AutoCAD (engineering and design)	that students can capitalise and achieve the majority of their marks.	that students can capitalise and achieve the majority of their marks.	 Section B - Design Brief and Spec Section C - Development Section D - Making Section E - Evaluation 	
Key Questions	What is the difference between a local and cloud rendering server? What is a component? How can we combine components so they interact with each other? What is a live or dead load? What does 'non-destructive' testing mean and how can we conduct one?	What is relevant research and what does it look like? How should you conduct primary and secondary sources of research? Why do we need regular feedback and dialogue with our consumer? How do we present our initial ideas and develop them?	What does a challenging brief and context look like? What ways can we gather primary research? How do you draw higher level conclusions from your findings? How do we collect and present Data? How can we communicate our ideas?		How do you plan an essay style question? What are the command words for your exam paper? How do you effectively evaluate a product?
Assessment	Students will submit the following for assessment CAD models and renderings Manufacturing Sheets 3D printed model Students will be assessed on the above as well as their Summer task.	Students will be assessed on the following sections with the marks broken down like so. Section A - Initial investigations (10) Section B - Design Brief and Spec (5) Section C - Development (20) Section D- Making (10) Section E - Evaluation (10) They will also be assessed on the following two exams. 1) Materials and their properties (Woods, Metals, Polymers) 2) Materials and their properties (Paper, Card, Smart, Modern, Composite materials.)	 Students will be assessed on the following sections with the marks broken down like so. Section A - Initial investigations (15) Section B - Design Brief and Spec (10) Section C - Development (20) Section D - Making (15) Section E - Evaluation (15) They will also be assessed on the following exams. 1) Design Theory 2) Factors and influences on the design and manufacturing process 3) Threshold exam. 	Students will be assessed on the following sections with the marks broken down like so. Section A - Initial investigations (20) Section B - Design Brief and Spec (10) Section C - Development (25) Section D - Making (25) Section E - Evaluation (20) They will also be assessed on the following exams. 1) Legislation and Law in design 2) Design and the environment 3) Mock Exam 4) Mini Mocks (x3)	 They will also be assessed on the following two exams. 1) Materials and their properties (Woods, Metals and Polymers) 2) Materials and their properties (Paper, Card, Smart, Modern and Composite materials.) 3) Design Theory 4) Factors and influences on the design and manufacturing process 5) Threshold exam 6) Legislation and Law in design 7) Design and the environment 8) Mock Exam 9) Mini Mocks (x3)
